Descriptions

The full plastic explosion-proof plugs and sockets can be used in the explosive gas atmospheres where the locations of local power supply control and electrical installation and mobile machinery place need to be moved and transformed frequently.

The flexible shutter spring that has a lot of contact surface can guarantee the small contact resistance and low temperature rise meanwhile the force of inserting in and pulling out can be reduced minimally which ensure the normal functions and permanent self-cleaning effect of the plug and socket device is designed at the joint of insert sleeve in the socket of the plug and socket device due to the contact resistance between the plug and socket is changed greatly and the electrical transport properties can be effected directly when the plug and socket device is affected by the surrounding environment (such as temperature, dust, corrosion, etc.) .

The interlock switch is equipped with the socket device. The switch is not turned on if it is not rotated and the plug can not be pulled out when the switch is turned on after the plug is inserted into the socket, which the non-live action is realized. The protective covers are equipped on both plug and socket, which ensure the reliability of the protective degree. Therefore, the plug and socket device can be used under the extreme conditions.

- Self-cleaning inserting sleeve, low transmission resistance.
- Protective covers ensure high degree of protection.
- Small force of inserting and pulling.
- IECEx International approval, ATEX European union approval.

Sockets and plugs for industry are designed to conform to the international standard IEC60309, CEE publication, "Standard Requirements of sockets and plugs for industry" and GB/T11918 "Couplers of plugs and sockets for Industry". When selecting plugs and sockets in the present range of standard for manufacturing, the circular socket and plug should be selected and the plugs and sockets have been designed. clock and colour mis-inserting proof according to different voltage, current and number of pole.

①

◀ The protective cover of the wall type sockets are fitted with openings for padlocks.

②

◀ Wall type sockets are fitted with protective covers which secure degree of protection **IP65**. When using it, turn round the cover according to arrow, and the cover will be opened, then the plug can be inserted.

③

◀ The pins of the plugs are opposite to the sockets.

④

▲ Plugs insert wall type sockets completely.

⑤

▲ Turn right the plugs, when hearing the sound of "kaca", while the power is connected. In this case, it's impossible to pull out the plug from the socket. Last revolve the plug and lock it on the socket to comply with the requirement of **IP65**.
